1. This Office action is in response to the interview of 5/21/04 and the after final amendment filed 5/12/04, now entered.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

In the claims: in claim 42, cancel the bulk of the middle portion so that the claim now reads --42. The process of claim 41 wherein X is halogen.--

3. Authorization for this examiner's amendment was given in a telephone interview with Kevin Carroll, Esq., on 5/21/04.

4. The following is an examiner's statement of reasons for allowance: the independent claims as now amended require that the transition metal compound be a combination metallocene/heteroarene. The only prior art that fairly discloses this type of compound is Etherton, which does not fairly disclose or teach using a combination of cocatalysts. The newly-cited Sato et al. and Weatherhead references, while disclosing first combining a heteroatom-containing transition metal compound with a boron ionizing agent followed by reaction with aluminum alkyls, have the hetero atom on the transition metal compound exo to the arene ring, contrary to the present application. Regardless, neither of these two references appears to be prior. The former primary references are silent on use of any type of heteroatom containing metallocene, whether the hetero atom is endo or exo in the ring.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
